# TNS Spoof Protection

Prevent Call Spoofing and 71esses an20 0 g80 0 g970 g80 0 customers defrauded.

TNS Spoof Protection solves this problem with an innovative technology and zero trust policy that safeguards enterprises their customers by immediately blocking unverified calls from registered numbers. TNS zero trust policy never trust always enables end-to-end enhanced secure communication, verify every call, continuous monitoring with increased visibility and eliminating the vulnerability to sophisticated voice fraud.

TNS Spoof Protection offers enterprises multiple out-of-band methods which pre-register their calls using the TNS Enterprise Authentication solution. These methods, accomplished via a REST interface with the Call Event API or through SIP Invite Redirect, streamline onboarding and minimize enterprise effort. Calls verified by TNS Enterprise Authentication are authorized for delivery, while unverified calls are identified as spoofed and blocked.

## Features and Benefits of Spoof Protection
